

Software/Systems Engineering Lecturer and Consultant

Objektum Solutions, a well-respected training and consultancy company in the Aerospace and Defence industries, is looking for experienced software and/or systems engineers to join our technical team of lecturers within the training/consulting arm of our successful business.

This opportunity will involve the development and delivery of bespoke Software/Systems Engineering training material for real-time / embedded systems within the aerospace and defence sector (both on and off site).

You don't necessarily have to have training experience but be a confident and personable professional who has the potential to be a trainer and be able to share your knowledge.

This diverse role will potentially include:

- Researching new technologies
- Understanding customer technical needs
- The development of bespoke course material (including worked examples)
- On-site consultancy
- Technical support

This challenging role requires the candidate to possess:

- Good presentation skills
- A professional approach and appearance
- The ability to communicate well
- The ability to explain concepts clearly

Due to the technical nature of this job, we are looking for people to have at least 10 years experience of software and/or systems development. Training can be provided where needed, but you should possess skills in some (or all) of the following areas:

- Design techniques (OOA/OOD)
- UML/SysML
- Ada, AdaTest,
- C, C++, Java
- HOOD, CORE
- Embedded Systems
- Hardware / Software integration
- Mil-Std-1553 and Military Standards

You may already be a trainer looking for freelance work with a trusted associate or a software professional looking to work on projects on short term contracts with a dynamic company – either way, please contact us if you are interested.
